

cardiolife AED

Automated External Defibrillator

AED-2152K

Fighting Disease with Electronics

 NIHON KOHDEN

Only 3 steps to save a **life**

Step 1. Open the lid

Open the lid to turn on the power.

The voice instruction starts immediately to guide you how to operate AED.

Step 2. Attach the pads to the patient

AED pads are pre-connected, and there is no need to distinguish right from left.

Just remove the backing and press them onto the patient's chest.

Step 3. Push the shock button*

If the shock is needed, the shock button is flashing.

Push the button to deliver the electrical shock to the patient.

*In EMS mode, the operator has to decide the ECG timing analysis by pushing the analysis button.

Self test for reliability The AED has a self check function with daily and monthly tests.

System Test

Indicates current operating condition with green and red signals.

Battery Test

Indicates remaining battery life and possible trouble points.

Pads Test

Nihon Kohden pad connectors have special technology* to check and indicate the pad condition.

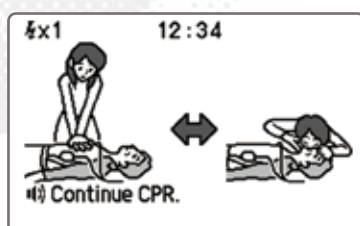

*patent pending

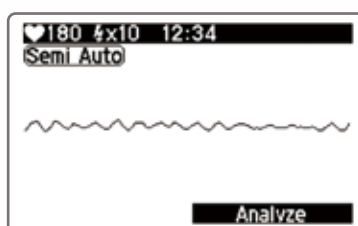

Automated External Defibrillator
AED-2152K
